

General Installation Notes:

- ⦿ Observe and conform to all local building and plumbing codes.
- ⦿ All Native Trails basins, especially undermount and apron front installations, should be installed by professional installers.
- ⦿ Our basins are hand crafted and dimensions are approximate, we recommend using the actual basin for the cut-out.
- ⦿ Different countertop materials will require different methods of cutting and may have other specific needs such as exposed areas of wood that may need waterproofing.
- ⦿ Make sure a watertight seal exists on all drain connections.
- ⦿ DO NOT place basin directly on floor. After unpacking, place basin on protective material such as foam molds from the packaging.
- ⦿ **Remember to always use non-abrasive cleaners on Native Trails basins. Mild soap and water is recommended. Refer to Care & Maintenance for further information.**

For Drop-In Installation (not including Raised Profile basins):

1. Use actual basin as your template. Place it upside down on countertop and mark countertop by tracing edge of basin. Be sure to allow clearance for faucet and other access ories or fixtures.
2. Measure inside edge of lip and mark countertop accordingly, inside of the first line.
3. Cut countertop midway in-between the two lines.
4. Temporarily place basin in hole to verify proper fit.
5. Apply silicone around hole in countertop, and place basin in hole.
6. Use a level to make sure that the basin is sitting level in all directions, front to back and side to side; while pressing down to seal.
7. Carefully remove any excess silicone.
8. Install the drain according to the drain's installation instructions.

For Undermount Installation:

1. Use actual basin as your template. Place it upside down on countertop and mark countertop by tracing edge of basin. Be sure to allow clearance for faucet and other accessories or fixtures.
2. Measure inside edge of lip and mark countertop accordingly, inside of the first line.
3. Cut countertop on inside line.
4. Apply silicone around hole in underside of countertop, and position basin.
5. Use a level to make sure that the basin is sitting level in all directions, front to back and side to side; while pressing down to seal.
6. You may use mounting clip fasteners to secure basin under the countertop if desired.
7. Carefully remove any excess silicone.
8. Install the drain according to the drain's installation instructions.

For Vessel Installation:

1. Measure outside perimeter of drain opening and mark countertop
2. Cut countertop for drain opening.
3. Place basin on top of countertop and make sure that the drain flange sits down inside of countertop so bottom of vessel is flush with the countertop
4. Use a level to make sure that the basin is sitting level in all directions, front to back and side to side.
5. Install the drain according to the drain's installation instructions.
6. The hold down nut of the drain pipe will secure the basin to the countertop. Depending on the size of the hole in the countertop, a large washer may also be necessary.
8. A bead of clear silicone can be used to seal the vessel to the countertop, if desired.

For Raised Profile Installation:

1. Use actual basin as your template. Place it upside down on countertop and mark countertop by tracing edge of basin. Be sure to allow clearance for faucet and other accessories or fixtures. *****(See note below for Palisades Installation)***
2. Measure inside edge of lip and mark countertop accordingly, inside of the first line.
3. Cut countertop midway in-between the two lines.
4. Temporarily place basin in hole to verify proper fit.
5. Use wood screws from underneath the countertop and screw into wood blocks or use silicone on wood blocks to adhere/secure to countertop. Make sure that the screws align with the wood blocks. If the screws are not placed properly, damage to the copper may occur.
6. Use a level to make sure that the basin is sitting level in all directions, front to back and side to side; while pressing down to seal.
7. Apply silicone around hole in countertop
8. Carefully remove any excess silicone.
9. Install the drain according to the drain's installation instructions.

When cleaning up after installations, DO NOT USE ABRASIVE CLEANERS, as they may scratch and change the basin surface and finish. Use warm water, a soft cloth and a non-abrasive soap (such as dish soap) to clean the surface. Refer to Care and Maintenance Instructions for further information.

****Palisades:** Before cutting the countertop, turn basin over and measure from the bottom inner edge of the apron to the front edge of the basin (approx. 2.5") This will provide the measurement for determining where to cut and place the basin so the apron front extends properly over the edge of the counter top.
